

COLOR SELECTION GUIDE

Color Dispersions for Thermoset Plastics

STANDARD COLOR BLENDS

Standard color blends are comprised of two or more single pigment base colors (see next section). This allows rapid custom blending of any standard color in small or large quantities at low cost. Because standard color blends are pre-matched to FERRO color standards,

they can be produced more rapidly than custom blended colors which may require custom color matching.

Minimum order: One gallon, or 10 lbs.

STANDARD SINGLE-PIGMENT COLOR DISPERSIONS

Single-pigment base colors or "masstones" are comprised of the finest quality pigments which are highly loaded into a range of reactive or compatible resin vehicles, and specially processed for maximum strength, uniformity, and economy.

Single-pigment masstone colors can be incorporated full strength into your resin or let-down with various percentages of a white single-pigment dispersion to create masstone tints. In addition, two or more single-pigment colors can be blended to produce

standard color blends (see inside), or to match virtually any custom color.

Minimum order: One gallon or 10 lbs.

10% TINT MASSTONE						
	VIOLET 19 (BS)	RED 122	RED 101 (BS)	PV 19 (RS)	PR 48:2	PR 254
10% TINT MASSTONE						
	PB 6	RED 101 (YS)	PR 48:1	PO 36	PO 16	PB 11
10% TINT MASSTONE						
	PY 42	PY 191 (RS)	PY 151 (GS)	PY 14	PG 17	PG 7
10% TINT MASSTONE						
	PB 15:3	PB 29	PV 23	PBK 7	PBK 11	PW 6
