

Tougher easy-to-clean coatings for enduring brands.

Tough enough for commercial-grade cookware and bakeware, RealEase can be applied in just one coat over aluminum, aluminized steel, enameled steel, cast iron—and even ceramics.

Differentiate your products and add appeal with RealEase's infinite color possibilities—including sparkle effects. Ferro can develop your own custom color.

Ferro's RealEase™ porcelain enamel hybrid nonstick coatings make it easier to keep things clean—in the kitchen and in the environment. RealEase is easy to clean with three times the scratch resistance of conventional nonstick coatings, and meets 2010 EPA regulations. Cleanability is far superior to that of aluminum enamel, and RealEase is NSF-certified for food contact according to FDA guidelines.

RealEase offers long-lasting great looks and performance. It resists scratching with metal utensils at cooking temperatures and is dishwasher safe. Its color and nonstick properties won't degrade with the heat of cooking or baking.

With RealEase, beautiful finishes are just the beginning.

RealEase™ makes cleaning small appliances really easy, too.

RealEase's durability and heat resistance make it ideal for adding nonstick cleanability to toaster and microwave ovens. It may be used continuously at temperatures up to 500° F, and has the highest rating on acid resistance.

Long-lasting nonstick coatings in just about any color for use with any utensils.

For commercial or consumer kitchens...cookware and bakeware...griddles and simmer plates...small appliances...smokers and backyard grills.....

Isn't the choice really easy?
